Particular activation of target cell expressing modelized & protein coupled receptor - allows control of cellular proliferation, especially for amplification of transfected cells in gene therapy expecially for amplification of transfected cells in gene therapy coupled transports of a contract of special comprises RASI Call, a G protein-coupled receptor (ROR) (see also WAD27) modified at 17 amino acid poloid receptor (ROR) (see also WAD27) modified at 17 amino acid poloid receptor (ROR) (see also WAD27) modified at 17 amino acid poloid receptor (ROR) (see also WAD27) modified at 17 amino acid poloid receptor (ROR) (see also WAD27) modified at 17 amino acid poloid receptor (ROR) (see also WAD27) modification of recombinant protein. A novel method for selectively cativating a target cell (TO) comprises: (1) introducing into the cativating a target cell (TO) comprises: (1) introducing into the cell a nucleic acid sequence (T) (see T9260) that expresses RASIC (B) that bind or and activate (A), inducing the 6 protein coupled cellular response associated with receptor activation. (A) has: (a) decreased binding affinity for a selected natural ligand of the callular implants comprising a TC transfected with (I); in the decreased binding affinity for gloid cellular response (C) is and transferic cells including affinity for (B); and (C) is activation of a cellular implants comprising a TC transfected with (I); isolated (I); and transgenic animals expressing (A). Activation of secretion of a cellular product, particularly a heterologous cold cellular product, particularly a heterologous cold cellular product on the response therapeutic protein encoded by a second inserted nucleic acid sequence. Particularly it is used to expand the relatively few cells that are successfully transfected during gene therapy contraction, or pagenty production of acid mals, expression or stimulation of (A) is designed to develop candar arrhythmia, symptoms of bone diseases, salures, weached contraction, or pigment production of included for p
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             38 vdspiqifrgepgptcapsaclppnssawfpgwaepdsngsagsedaglepahispaipv 97

Polymperides - for use in therapeutic compositions and in
screening assays for useful drug substances.
Scham 12; Page 236-239; 300pp; English.
Contactual amino acid sequence of the novel human kappa opioid receptor.
Conte correspoding gene was isolated from a human brain hippocompus CDNA
Ilbrary using a probe from the mouse kappa opioid receptor gene (075926).
Contactual smissing the N-terminal sequence. The C-terminal sequence is
Conteminal 293 amino acids, 281 residues are identical and 6 residues
Conteminal 293 amino acids, 281 residues are identical and 6 residues

R65188 is the rat mu-subtype opioid receptor protein purified from rat brain membranes, with biotinyl.b-endorphin (R56665) as its ligand. It is encoded by the nucleotide sequence 079199 which was synthesised using 071022 and 071023 as PCR primers. R65188 is useful for identifying othe receptor subtypes, for screening new opioid ligands, and for studying mechanisms of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Pure mu-type opioid receptor protein - and nucleic acid coding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             10..12 / ____/note= "Putative N-linked glycosylation site"

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Transgenic animals defective in one type of opioid receptor - used transgenic animals defective in one type of opioid receptor - used transgenic animals for treatment of pain, drug addiction and transgenic presents for treating side effects of known opiate(s) bisclosure; Fig II: 58pp; French.

This sequence represents the mouse mu opiate receptor. The gene sequence is used to generate a transgenic non-human mammal, for identifying agents for treating disorders associated with opiate receptor: In the mammal, the expression of the gene encoding the opiate receptor is modified, particularly by the deletion of an exon and/or insertion of a marker gene, e.g. the neomyclin resistance gene, into the sequence. Especially the expression of the gene is altered in nervous tissue. The agents potentially useful for treating severe pain (chronic or acute), drug addiction and/or prevention or treatment of transplant rejection (as immunosuppressants). The method may isolate and identify powerful

A cDNA library constructed from human caudate nucleus mRNA was screened with rat mu opicid receptor cDNA under conditions of low stringency. One positive clone included the sequence given Q89226, encoding a mu opicid receptor MOR (R71964). The cDNA is used for prodn. of recombinant MOR, in gene therapy, etc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ..

New nucleic acid encoding new human mu opioid receptor - and related vectors, transformed cells, antibodies etc., useful in diagnosis, treatment and drug screening.

Disclosure, Page 190-194; 266pp; English.

A 365 bp fragment of the mouse delta opioid receptor was used to screen a rat brain cDNA library under low stringency conditions.

One positive clone included the sequence given in 089222, encoding transfected CHO cells.
                                                                                                                  cpds. for activity as opiate agonists or antagonists bisclosure; Page 26-28, 49pp; English.

MAGR CDNA was obtd. from a human cerebral cortical cDNA library screened with fragments of a rat mu opiate receptor. The encoded protein showed homology to rat mu, delta and kappa opiate secuence (R76781-83).

hMOR cDNA was obtd. from a human cerebral cortical cDNA library screened with fragments of a rat mu opiate receptor. Expression of hMOR1 in COS cells revealed high affinity reconnition of the mu opiate specific ligand. Recombinant hMOR1 can be used to screen compounds for analgesic activity.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 6, Application US/08149093A
Patent No. 5658783
GENERAL INFORMATION:
APPLICANT: Burnow, James R
APPLICANT: Burnow, David K
TITLE OF INVENTION: A No. 5658783el Mammalian Methadone-Specific
TITLE OF INVENTION: Opioid Receptor Gene and Uses
NUMBER OF SEQUENCES: 7
CORRESPONDENCE ADDRESS:
ADDRESSE: Banner & Allegretti, Ltd.
STREET: 10 South Wacker Drive, Suite 3000

Chen, Y.; Mestek, A.; Liu, J.; Yu, L.
Biochem. J. (1993) 295:625-628
Molecular cloning of a rat kappa opioid receptor reveals
sequence similarities to the mu and delta opioid receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      S.

TT This protein mediates the effects of morphine and the related
drugs, and is the targets of endogenous opicid peptides.

PERGEN STRUCTURE and functional expression of a guinea pig kappa opioid (dynorphin) receptor., PROC. NATL. ACAD. SCI. U.S.A. 91:3779-3783(1994).

-I- FUNCTION: INHIBITS NEUROTRANSMITTER RELEASE BY REDUCING CALCIUM ION CURRENTS AND INCREASING POPASSIUM ION CONDUCTANCE. RECEPTOR FOR DYNORPHINS. ANY PLAY A ROLE IN AROUSAL AND REGULATION OF AUTONOMIC AND NEUROBNOCKINE FUNCTIONS.

-I- SUBCELLULAR LOCATION: INTEGRAL MEMBERANDE PROTEIN.

-I- SIMILARITY: BELONGS IO FAMILY 1 OF G-PROTEIN COUPLED RECEPTORS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps

EARPESSION Of two variants of the human mu opioid receptor mENA in SK-N-SH cells and human brain.";
FEBS LETT. 354:213-216(1994).

-! FUNCTION: INHIBITS NUMCOTRANSMITTER RELEASE BY REDUCING CALCIUM ION CURRENTS AND INCREASING POTASSIUM ION CONDUCTANCE. RECEPTOR FOR BETA ENDORPHIN.

-! SUBCELLULAR LOCATION: INTEGRAL MEMBRANE PROTEIN.

-! SIMILARITY: BELONGS TO FAMILY 1 OF G-PROTEIN COUPLED RECEPTORS.

-! SIMILARITY: BELONGS TO FAMILY 1 OF G-PROTEIN COUPLED RECEPTORS.

TISSUE SPECIFICITY: BRAIN. IS EXPRESSED IN THE CEREBRAL CORTEX,
CAUDATE PUTAMEN, NUCLEDA ACCUMENS, SEPTAL NUCLEI, THALAMUS,
HIPPOCAMPUS, AND HEBSULIA. NOT DETECTED IN CEREBELLUM.
SIMILARITY: BELONGS IO FAMILY 1 OF G-PROTEIN COUPLED RECEPIORS.
